O. Omotunde Assignment # 2 | Problem Set 1

U show ATA & AAT in general. (Proof and demonstration)

We will show this by contradiction

assume: ATA = AAT

NA WAY

let A be a mxn matrix wintm

AT by definition is a nxm mainx

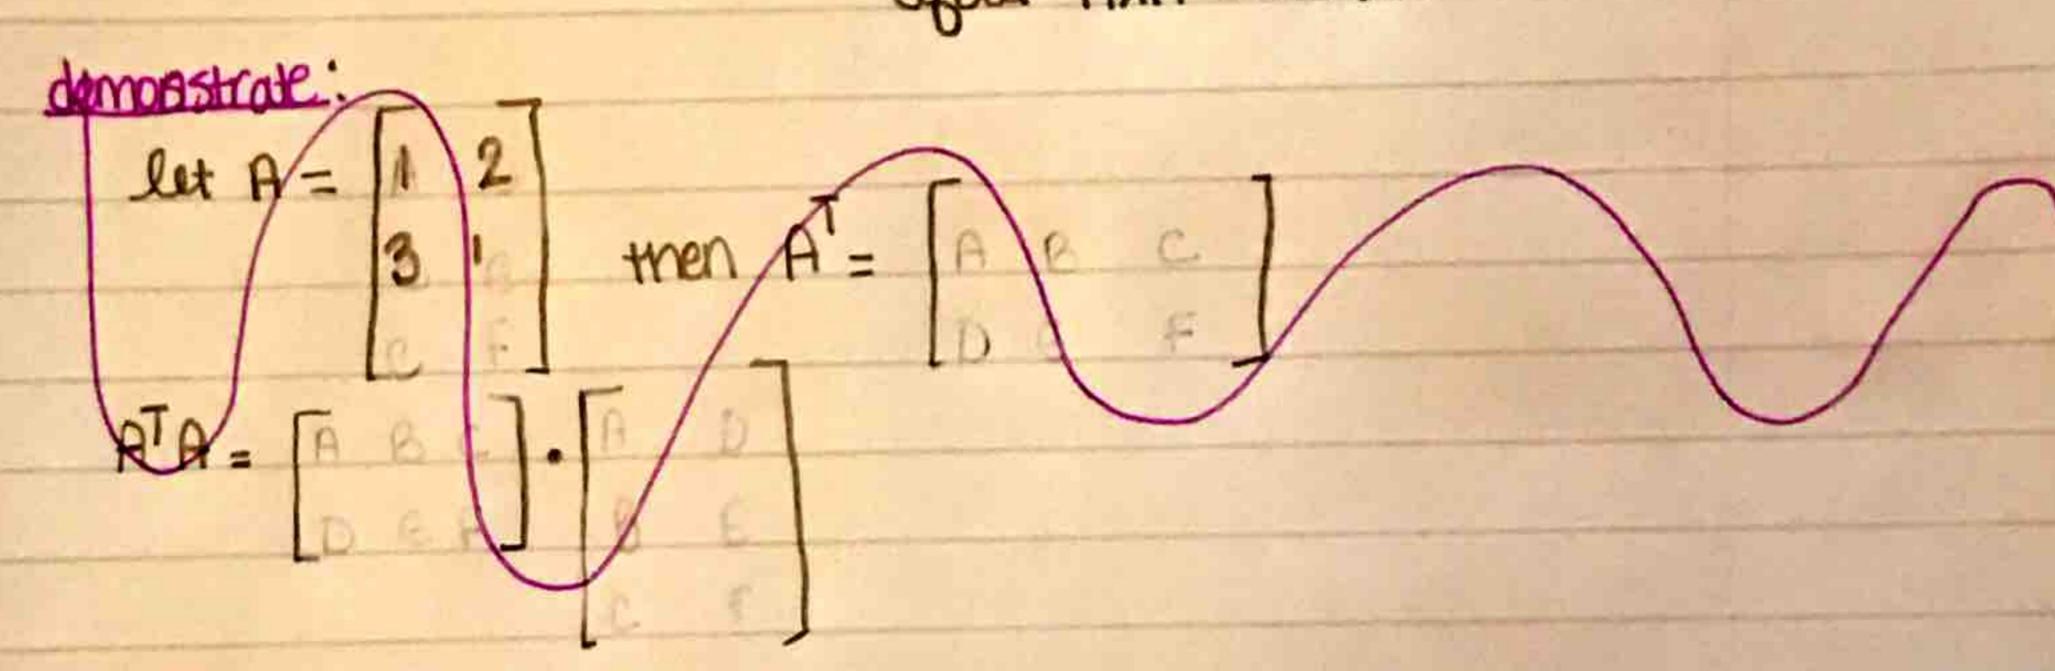

columns of AT are taken duredly from nows of A (rows > columns)

AT > Oxm

A > m xn so when use moltiply a nxm with mxn our resulting matrix is nxn as is the case with ATA.

AAT > mxn · nxm > mxm matrix.

since we stated n + m a mxm matrix cannot equal nxn matrix.

demonstrate:

Let  $A = \begin{bmatrix} 1 & 2 & 3 \\ 4 & 5 & 6 \end{bmatrix} \text{ mxn}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 3 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 3 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 3 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 3 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 3 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 3 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 3 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 3 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 3 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 3 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 3 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 3 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 2 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 3 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 2 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 2 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 2 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 2 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 2 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 2 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 2 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 2 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 2 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 2 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 2 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 2 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \\ 2 & 6 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \end{bmatrix} \text{ nxm}$   $A^T = \begin{bmatrix} 1 & 4 \\ 2 & 5 \end{bmatrix} \text{ nxm}$
